Fast Easy CD to CD copying

Copying CD's is a click away. **QuickCopy-CD** copies CD-ROM's and CD-R's on Win95 and Win NT systems. It's simple. Insert a Source CD-ROM or CD-R into the CD reader and click on the Window's CD→CD button. In just a few minutes your CD is copied.

CD Image copying

QuickCopy-CD makes images of CD's on the PC's internal hard drive. This image is then duplicated onto all available CD-R drives. Unlike dedicated systems that overwrite previous images, the number of **QuickCopy-CD** hard disk images is limited only by the

capacity of the PC's hard drive. On an NT system this can be hundreds of gigabytes of images. Storing images is ideal for service bureaus that want to keep customers' work on-line for some period of time or back it up onto magnetic tape or other removable media.
